❖ Preface

- Someone had quipped quite aptly,

"If all difficulties were known at the outset of a long journey, most of us would never start out at all."

- We began, this journey by keeping this in mind. The path was uncertain. We did not know what lay ahead, yet we marched ahead. Always having each other's back.

- This journey has been marked with experiments some which passed with flying colours yet some failed miserably.

.

- We have tried our level best in order to include as many functionalities and requirements as initially proposed, yet some imperfections remain.

- This document involves those aspects of the project which we as team were not able to implement, under different circumstances.

- **Functionalities that have not been included in the Conference Management System website:**

- 1. Auto Generated Mail:**

Earlier, the group had decided to implement an auto mail generated notification. This notification would be sent to the Sign-up accounts mail account, once that person had successfully registered for the conference.

- 2. Registration Fee payment portal:**

A certain fee/charge was to be paid by the user once he/she would register for any conference. For this a registration fee payment portal would be the place where user can pay the fees.

- **Functional Requirements that have not been included in the Conference Management System:**

- 1. Users should be able to register themselves:** Upon successful registration, auto-generated mail containing a receipt should be sent to them as proof of registration.
- 2. The registration for a conference:** It may be paid or unpaid, depending on the conference requirements.
- 3. A portal to manage the accommodation of participants, where one should be able to register him/herself:** If a conference is organised at a certain place, then a portal will contain a list of accommodations that has hotels, hostels, rented houses, etc.

4. Tracking of rooms: Students should be able to track their allocated rooms.

5. Applying for travel grants: A portal for students to be able to apply for travel grants. So that students residing far away can also get a chance to participate in conferences.

- **Non-Functional Requirements that have not been included in the Conference Management System:**

1. **Security of Payment Portal:** The transaction details should remain secure. It includes the PIN or the CVV number entered by the user along with any OTP generated.

2. **A dynamic feedback system:** Attendees of the conference should be able to share their thoughts and experiences through feedback. The admin can later view those feedbacks and can make any changes later.
